CLAIMS 1-10 ARE PENDING

1. The following is an examiner's statement of reasons for allowance:

As to **claims 6-10**, the prior art of record teaches computations and re-computations that are both additive and non-additive in a variety of settings. The utility of distinguishing additive from non-additive measures can be seen from a simple example:

Suppose that an accounting computation takes place over two data sets, one in which the data is arranged at year and month levels, the other in which it is arranged at month and week levels. These measures may be combined in the month dimension. So long as there is no overlap in time, the results of the component computations are additive, but if they act in concert on data taken from the same month, the results cannot be added together; the aggregate measure is not additive.

While this is clear in principle, the prior art of record does not anticipate nor suggest the claims as written.

As to claims 1-5, it is considered that these claims provide a useful, concrete and tangible result on the grounds that aggregate measures are of considerable utility in the database art. The calculation of two sets of metrics across levels in different dimensions and adding a second portion of the measures to form added measures is neither anticipated nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
